IBM PROJECT

Crude Oil Price Prediction

AI ENABLED TOOL FOR OIL PREDICTION

A geologist is a scientist who studies the solid, liquid, and gaseous matter that constitutes Earth and other terrestrial planets, as well as the processes that shape them. Geologists prairies, as well as the processes that shape ment, occuping usually study geology, although backgrounds in physics, chemistry, biology, and other sciences are also useful. Field research (field work) is an important component of geology, although many subdisciplines incorporate laboratory and digitalized work. I. Mining II.Government

Activity sectors:

III.Petroleumindustry

IV.Engineering
All over the world the crude oil is supplied by West Asian Countries. The Oil price is fluctuacting day to day.lt is not easy to predict the price of the crude oil.Because of this, we are going to create an application which is based on Artificial Intelligence(Al) According to economic theory, the price of crude oil should be easily predictable from the equilibrium between demand and supply, wherein demand forecasts are usually made from GDP, exchange rates and domestic prices, and supply is predicted from past production data and reserve data.
